Given the information below:

//5280 feet per Mile
//1 yard per 3 feet
//12 inches per foot
// 2.54 centimeters per inch

int mile = 5;

Determine how many Yards, feet, inches, and centimeters are in 5 miles.

The printout should look like this:

5 Miles is equivalent to:

Number of Yards:
Number of Feet:
Number of Inches:
Number of Centimeters:
